

Frontend Technical Test

You're building a dashboard interface using React OR Angular 2+.

There will be 3 primary components for this web-app.

1. Landing page - This page will contain information about the dashboard you're building.
This page needs to have at least 3 sections of content (can be dummy and you can use the design shared for the landing page).
2. Authentication page - A page for a user to log in from and access the dashboard.
3. Dashboard - The dashboard page is expected to have at least the following
 - a. Header, footer, navigation menu.
 - b. 3 different types of interactive charts (you may use any charting library).
 - c. Date filters.
 - d. Interactive table with search and sorting.
 - e. Integrate a metric/parameter from any public third-party API.

You are free to design the pages based on your preference.

Host this app on the cloud partner of your choice and share the link to view the app.

Describe the deployment process that you followed.

Add/share relevant code snippets/files/repository along with your answer.
